Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

- (1). **Claims 1-3, 9-12** are rejected under 35 U.S.C. 102(b) as being anticipated by Wolf et al (US05749930A).

As to a flue gas washer comprising a supporting construction for spray pipes for cleaning of at least one horizontally disposed droplet separator system which is formed by droplet separator packets supported on carriers, characterized in that the supporting construction for the spray pipes is disposed at or between the droplet separator packets in independent claim 1, Wolf et al (US05749930A) disclose mist collector arrangement for gas washer (Title). as illustrated in the figure below, which include supporting construction 23, spray pipes 24, 25, carrier (not numbered), which also show the supporting construction for the spray pipes is disposed at or between the droplet separator packets.

Fig. 3

Fig. 4

As to droplet separator packets having reinforced end portions for the arrangement of the supporting construction in **claim 2**, reinforced end portions being formed in a box-like manner in **claim 3**, as illustrated in the Figure 3 above, the end portion is reinforced by a Γ shape fixing, which reads on the limitation of instant claim 2.

Box-like manner can be Γ shape box-like as claimed.

As to supporting construction being formed by supporting members which are disposed between adjacent droplet separator packets in **claim 9**, as shown in Figure 4 above, which reads on the limitation.

As to supporting member being connected to the separator packets through flange connections in **claim 10**, as shown in Figure 3 above, the flange between supporting member 23 and separator packets reads on the limitation.

As to supporting member carrying the spray pipes directly in **claim 11**, as shown in the Figure 3 above, additional supporting construction are for spray nozzles 24 and 25 (Col. 4, line 44-45).

As to supporting construction for use in a flue gas washer in **claim 12**, Wolf et al (US05749930) disclose mist collector arrangement for gas washer, as shown in the Figures above, which reads on the instant claim.

Allowable Subject Matter

(2). **Claims 4-8** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion
